SEPTEMBER 2026

Developing District Scale Gold Projects

RESTARTING GOLD PRODUCTION

In Québec's Prolific Abitibi Belt, near Val-d'Or

CSE: **LFLR** | OTCQB: **LFLRF** | FSE: **3WK0**

WHY LAFLEUR?

LaFleur Minerals combines its wholly owned Beacon Gold Mill with district-scale exploration assets near Val-d'Or, Québec. The Company is advancing mill recommissioning in Q4 2026, with **initial startup planned for Q1 2027**.

SWANSON GOLD PROJECT | FLAGSHIP ASSET

More than 20,000 hectares (200.7 km²) rich in gold and critical metals across 490 mineral claims and a mining lease, hosting the Swanson, Bartec and Jolin gold deposits. The consolidated project has tripled in size.

Road and rail access, 66 km north of Val-d'Or and approximately 66 km from Beacon, close to Agnico Eagle, Eldorado and Probe Gold (Fresnillo).

2026 mineral resource estimate: combined open-pit and underground resources, effective February 18, 2026.

Category	Tonnes	Grade Au	Gold
Indicated	2.96 Mt	1.69 g/t	160.3 koz
Inferred	1.08 Mt	1.93 g/t	66.8 koz

Mineral resources are not mineral reserves. See page 2 for the PEA caution.

Completed PEA: after-tax NPV (5%) of C$101 million, 65% IRR and 1.8-year payback; AISC of US$1,569/oz at a base-case gold price of US$2,750/oz. The study models a seven-year mine life.

BEACON GOLD MILL | RESTARTING PRODUCTION

100%-owned, permitted, 750 tpd mill; refurbishment approximately 95% complete, transitioning to commissioning. Approximately C$24 million in upgrades by the previous owner and LaFleur; estimated replacement cost C$71.5 million.

Estimated restart cost: approximately C$5 million. The PEA models expansion to 1,250 tpd with C$31 million total initial capital, including C$15 million for mill upgrades. A separate 3,000+ tpd option is under consideration.

Financing: closed a C$11,015,760 bought-deal financing in June 2026 for Beacon recommissioning and Swanson drilling. LaFleur is working toward a definitive prepayment and offtake agreement with Trafigura.

INVESTOR FACT SHEET

SWANSON | EXPLORATION PROGRESS

More than 30,000 metres of LaFleur drilling completed, alongside more than 36,000 metres of historical drilling. The 2026 MRE increased Indicated resources by approximately 30% versus 2024, using a US$2,500/oz gold assumption.

Selected historical intersections: 41.0 m at 3.62 g/t Au (SW-03-07) and 36.0 m at 4.44 g/t Au (BAR31-84).

VALIDATION AND DEEP DRILLING

Hole ID	Interval (m)	Au (g/t)
SW-25-066	158.28	2.05
SW-25-080	255.04	1.18
SW-25-081	136.01	1.65
SW-25-085	80.00	2.95
SW-25-086	88.05	2.37

Including **1.1 m at 121.0 g/t** in SW-25-066; **1.5 m at 91.1 g/t** in SW-25-075; and **0.75 m at 92.9 g/t** in SW-25-077. Intervals are drilled core lengths; true widths have not been determined.

Deep drilling extends mineralization below the current resource model. More than 50 priority targets support further exploration at Swanson, Bartec and Jolin; growth toward one million ounces remains an exploration objective.

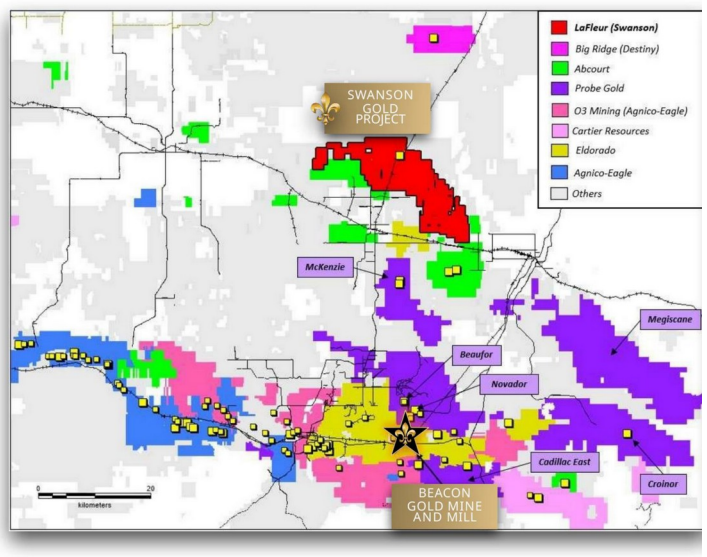
BEACON | OPERATING PLAN

The **completed PEA** evaluates processing Swanson material at Beacon. ERM now manages environmental and baseline studies. LaFleur is permitting an approximately **100,000-tonne bulk sample** at Swanson.

The 750 tpd mill includes crushing, grinding, flotation, regrind, leaching and Merrill-Crowe circuits. Québec authorization covers **1.8 million tonnes of tailings**. Custom milling opportunities are under review in a region with more than 100 historical and operating mines.

Beacon's property includes a mining concession and 11 mining claims, with historic underground infrastructure accessible via the shaft and ramp. Beacon I and II recorded limited gold production in 1984–1988 and 2005.

BEACON GOLD MILL



Swanson–Beacon road and rail corridor

McKENZIE EAST

100% interest in approximately **2,482 hectares across 73 claims**, adding exploration ground and potential future feed for Beacon. Adjacent McKenzie Break resources belong to a separate property.

TECHNICAL INFORMATION & CAUTIONARY STATEMENTS

Technical source. Summarized from LaFleur's September 2026 investor presentation, which identifies Marc Ducharme, P.Geo., VP Exploration, as the qualified person who prepared and approved its technical disclosure. The Swanson–Beacon PEA technical report by ERM is dated March 27, 2026, effective March 16, 2026. Mineral resources are not mineral reserves and do not have demonstrated economic viability.

PEA caution. The PEA is preliminary in nature and includes Inferred mineral resources considered too speculative geologically to have economic considerations applied that would enable them to be categorized as mineral reserves. There is no certainty that the PEA will be realized.

Disclaimer. This document is for discussion and information only; it is not an offer or solicitation to enter a securities or other transaction. It is not a final expression of transaction terms and may be amended, superseded or replaced. It does not identify all direct or indirect investment risks. Financial scenarios, assumptions and information may rely on third-party, market or partner data. Investors should obtain professional advice.

Forward-looking information. Startup timing, expansion plans, exploration objectives, production and economic estimates reflect expectations and assumptions, involve risks and uncertainties, and may differ materially from actual results. Consult the Company's full disclosure and technical report. Market data is dated September 17, 2026.
